PERSONAL SUMMARY

Computer vision and robotics engineer with an MSc in Robotics from the University of Twente (completing Feb 2027) and 5+ years of industry experience in computer vision and deep learning for robotics. Research focus: out-of-distribution robustness of vision foundation models, with a thesis on cross-domain generalization of feed-forward 3D reconstruction (VGGT-Ω). Background in 3D perception, 6DoF pose estimation, and edge deployment; 2 accepted papers - oral presentation at ACCV 2026 Workshop on Trustworthy Foundation Models in Imaging, and WACV 2027.

WORK EXPERIENCE

Lead - Algorithms and Research, CynLr (Cybernetics Laboratory) July 2020 - Aug 2025

- Implemented multi-camera stereo and system-wide robot calibration pipelines for precise depth perception and object tracking in visual authentication applications
- Developed modular C++ frameworks integrating cameras, sensors, and actuators with real-time algorithms for depth estimation, object recognition, and visual servoing.
- Researched neuroscience-inspired event-based imaging for high-speed temporal sensing, improving visual responsiveness beyond frame-based camera limits

TECHNICAL SKILLS

- **Programming:** Python, C++, MATLAB, LabVIEW
- **Frameworks:** PyTorch, OpenCV, ROS2, ONNX/TensorRT, Docker
- **3D Computer Vision:** feed-forward 3D reconstruction (VGGT, DUSt3R), MVS, SfM, stereo vision, depth estimation, NeRF, Gaussian Splatting, point cloud and LiDAR processing, sensor calibration
- **Foundation Models & Deep Learning:** vision transformers (DINO, ViT), domain generalization and OOD robustness, parameter-efficient fine-tuning, few-shot and metric learning, diffusion and flow matching, 6DoF pose estimation, object detection and tracking
- **Robotics:** visual servoing, robot calibration, sensor fusion, grasping and manipulation perception, sim-to-real pipelines
- **Deployment & Tools:** TensorRT/ONNX optimization, NVIDIA Jetson edge deployment, real-time processing, Git, CI/CD

PROJECTS

- **Cross-Domain Generalization of VGGT-Ω (MSc Thesis, In Progress):** Improving out-of-distribution depth and pose accuracy of a feed-forward 3D reconstruction foundation model via lightweight adaptation (Bridge causal modules, PEFT) on a frozen backbone. PyTorch · VGGT-Ω · DINOv3 · PEFT
- **Vision-Conditioned Trajectory Generation with Flow Matching:** Implemented conditional and mean flow matching models for vision-conditioned robotic trajectory generation on the PushT dataset. PyTorch · Flow Matching · Robot Learning

PUBLICATIONS

- **S. Angadi**, A. Briassouli. “Trusting MedSAM under Distribution Shift.” ACCV 2026 Workshop on Trustworthy Foundation Models in Imaging (TrustFMI), accepted (oral presentation).

EDUCATION

- Master of Science in Robotics (Algorithms and Software AI) — University of Twente, Enschede, Netherlands - Grade - 7.83 (Expected Feb 2027)
- Bachelor of Technology in Electronics and Communication Engineering — Ramaiah Institute of Technology, Bengaluru, India - CGPA: 8.34
