PERSONAL SUMMARY

Master's student in Robotics (Algorithms and Software AI) at the University of Twente with 5+ years of production-grade computer vision and deep learning experience. Expertise spans 3D perception, stereo calibration, 6DoF pose estimation, and multimodal sensor fusion, with a focus on bridging foundation models and SLAM-based systems for industrial robot perception.

WORK EXPERIENCE

Lead - Algorithms and Research, CynLr (Cybernetics Laboratory) July 2020 - Aug 2025

- Implemented multi-camera stereo and system-wide robot calibration pipelines for precise depth perception and object tracking in visual authentication applications
- Developed modular C++ and LabVIEW frameworks integrating cameras, sensors, and actuators with real-time algorithms for depth estimation, object recognition, visual servoing, and autofocus
- Researched neuroscience-inspired event-based imaging for high-speed temporal sensing, improving visual responsiveness beyond frame-based camera limits

TECHNICAL SKILLS

- **Programming:** Python, C++, MATLAB, LabView
- **Frameworks:** PyTorch, OpenCV, ROS2, ONNX/TensorRT, Docker
- **3D Computer Vision:** MVS, SfM, stereo vision, depth estimation, 3D reconstruction (NeRF, Gaussian Splatting), point cloud processing, LiDAR processing, SLAM (LiDAR/visual/multimodal), sensor calibration
- **Perception & Deep Learning:** 6DoF pose estimation, object detection & tracking, transformers (ViT, VLM, VLA), diffusion models, metric learning, embedding-based retrieval
- **Robotics:** Visual servoing, robot calibration, sensor fusion, grasping & manipulation perception, sim-to-real pipelines
- **Deployment & Tools:** TensorRT/ONNX optimization, NVIDIA Jetson edge deployment, real-time processing, Git, CI/CD

PROJECTS

- **Multimodal SLAM for Dynamic Industrial Environments (MSc Thesis, In Progress)**
Developing a multimodal SLAM system integrating thermal, RGB, depth, and LiDAR sensors on a legged robot platform for robust localization and mapping in dynamic industrial environments with unannotated data. Focus on sensor fusion, dynamic object handling, and contribution distinct from concurrent group research. ROS2 · LiDAR SLAM · Sensor Fusion · Gaussian Splatting · Legged Robotics
- **Depth-Aware Few-Shot Action Recognition (In Progress):** Developing depth-RGB fusion with metric learning for few-shot action recognition with improved spatial understanding. PyTorch · Depth Estimation · Few-Shot Learning · Metric Learning
- **Vision-Conditioned Trajectory Generation with Flow Matching:** Implemented conditional and mean flow matching models for vision-conditioned robotic trajectory generation on the PushT dataset. PyTorch · Flow Matching · Robot Learning

EDUCATION

- Master of Science in Robotics (Algorithms and Software AI) — University of Twente, Enschede, Netherlands - Grade - 7.83 (Expected Feb 2027)
- Bachelor of Technology in Electronics and Communication Engineering — Ramaiah Institute of Technology, Bengaluru, India - CGPA: 8.34
